

02 CORE FEATURES

Core Features

What each TRINETRA feature must do—without prescribing implementation code.

Product operating flow

Detect / Collect → Assess → Inform → Locate → Respond → Report

Feature definitions

#	Feature	Owner	Required behavior
1	Disaster Dashboard	Abhinav	Show active disasters, type, location, severity, status, alerts, risk summary, resources, recent reports, and map preview.
2	Disaster Map	Rahul	Display disaster locations, affected areas, safe zones, hospitals, relief centers, resources, and citizen report locations.
3	Alert System	Abhinav	Allow authorized personnel to create, preview, publish, update, and withdraw alerts; show current alerts to citizens.
4	Risk Assessment	Prinshu	Calculate or display an advisory risk level for a location using only available, validated inputs; expose explanation and limitations.
5	Safe Zones	Rahul	Show designated safe areas with location, source, last update, and known availability or capacity.
6	Emergency Resources	Rahul	Show hospitals, shelters, relief centers, services, and supplies with location and status.
7	Citizen Reporting	Abhinav	Capture disaster type, location, description, and optional image; store the report and expose it to authority review.
8	Authority Dashboard	Abhinav	Monitor incidents, citizen reports, alerts, map context, resources, and risk; support response decisions.
9	AI/ML Layer	Prinshu	Provide bounded risk analysis, classification, or recommendations where data and evaluation support it.
10	Authentication	Abhinav	Provide registration/login, secure sessions, and role-aware access for citizens and authorities.

Definition of done for a feature

- The user and problem are explicit.
- Inputs, output, states, and errors are defined.
- Dependencies and owner are known.
- Acceptance criteria are testable.
- The feature participates in the agreed end-to-end demo path.
